

24/7 EFFICIENT DRYING PROCESS

FULLY AUTOMATED DRYING KILNS

- Cost saving, fewer working hours, less rolling stock, fewer operations, less damage to kilns and material
- Lower costs per pallet due to higher efficiency, energy saving and capacity expansion
- Full continuous drying process with minimal staffing

Fully automated drying kilns and drying tunnels for drying and/or heat treating transport pallets

Together with BES Bollmann we have developed a drying kiln to dry and Heat Treat transport pallets, that, after the stacking robot, loads and unloads fully automatic without any human intervention. By making the stacks at trailer height, there is only 1 transport handling for the pallets. Partly due to the loading and unloading time of the rooms (6 minutes). We can dry and Heat Treat 24/7 365 days a year. This doubles our productivity with a relatively cheap investment
